How to read this report

This report shows many customers ride each route in the CTA bus system. Two types of numbers are presented in this report – ridership and productivity. Both are explained below.

How are customers counted?

Boardings are recorded using the bus farebox and fare card reader. A bus operator begins his or her duty by entering the route number into the farebox, allowing CTA to assign the ridership reported by the farebox to the proper route.

Ridership

The ridership numbers presented in this report are daily averages. Weekdays, Saturdays, and Sundays are reported separately. The averages are calculated by dividing the route's total monthly ridership for that day type by the number of such days that the route operated. For example, in September 2000 the #20 Madison  operated 20 weekdays and served 436,026 customers for an average weekday ridership of $436,026/20 = 21,803$. For routes that don't operate every day, such as the #19 United Center Express , the number of days that the route operates may be less than the actual number of days in the month.

Productivity

Productivity is the ridership on a route divided by the number of buses that operate on that route and the number of hours that they operate. That is, ridership per bus per hour.

For example, suppose route A serves 2,000 customers a day. Suppose further that route A is in operation for 10 hours, and that it takes 5 buses at a time to operate route A. Then the productivity of route A is $2,000/(10*5) = 2,000/50 = 40$. That is, on average 40 customers board every bus every hour on route A.

Productivity is a useful measure because the cost of operating a route is proportional to the number of buses on the route and the number of hours they operate.

What is route 0?

Occasionally, a bus operator may enter the route number incorrectly into the fare box. Although we have several ways to determine what the route number should have been, in some cases it is impossible to determine. In such cases, we consider the route "unspecified" and assign it the route number 0.

Why don't some routes have a productivity number reported?

Productivity is only reported for routes that have regularly scheduled service. Some routes, such as the #19 United Center Express , are only operated as needed and we do not report their productivity.

Why do we report the days in the month and the days in the average?

Usually, the number of days in the month and the number of days that we use to calculate average daily ridership are the same. On occasion, though, we experience data transmission problems that prevent us from identifying the route on which the ridership occurred. We exclude these days from the averages and divide by the number of days for which we have valid data.

Holidays

The following holidays are reported as Sundays:

- New Year's Day
- Memorial Day
- Independence Day
- Labor Day
- Thanksgiving Day
- Christmas Day

All other holidays are reported as the type of day they fall on.
